

Now offers a new service:
Pond Engineering Inspections

Ponds are not only aesthetically pleasing but also critical in removing pollutants from the environment and controlling storm water runoff. It is important that these ponds are regularly inspected for proper operation.

The goal of the Engineering Inspection is to:

- Comply with Water Management District rules
- Identify minor repairs before they become major headaches
- Ascertain that the pond is functioning as designed
- Ensure the pond is properly protecting our environment

We can schedule inspections on a monthly, semi-annual or annual basis. These inspections will be made by our Professional Engineer who will look for:

- Erosion at Inlets
- Sink Holes
- Control Structure Settlement
- Washouts
- Damaged Pipes
- Potential Berm Failure
- Missing Baffle/Skimmer
- Leaking Pipe Joints

Cracks and erosion in January

Don't let this happen to your pond!

Expensive headache in June

Catch the problem before it's too late!
